Re: City of Fort Wayne, Indiana
Water Works Improvements
Filtration Plant Additions
Contract 77-W-2

Dear Mr. Boller:

We submit the following documentation concerning Change Order No. 14 and Change Order No. 15.

Change Order No. 14 is in response to bulletin #12 issued to the contractor March 20, 1981. Clarifications of the proposed changes were requested on April 9, 1981. We responded to their requests on April 21, 1981.

Item #1

This change adds bracing to the monorail frame for lifting the carbon dioxide burners. This frame is utilized to maintain the burners and was braced to increase its stability.

Item #2

This item is to alarm high and low levels in the carbon slurry feeders. This will make the equipment compatible with the current operations of the plant. These alarms will assure adequate carbon slurry feed and also minimize wasteful overflow of the costly carbon.

Item #3

This item changes the new welding circuits to be compatible with the cities existing equipment as requested by the owner. During design the welding equipment was

assumed to be the standard single phase unit and was discovered during construction to require three phase power.

Item #4

Item 4 is circuitry changes recommended by the pneumatic conveyor supplier to prevent damage to the various diverter values. These requirements were not known during design of the system.

Change Order No. 15 is in response to bulletin #14 issued to the contractor April 20, 1981.

Bulletin #14 was issued at the owners request to eliminate head loss problems occurring at the chlroine dioxide generator panel. The bypass lines around the flow meters was increased from a 3/4" line to a 2" line. This will decrease the pressure at the chlorinator injector and chlorinate more efficiently.

If you require additional information, please feel free to contact us.

Very truly yours,

McNAMEE, PORTER AND SEELEY

BULLETIN NO. 14

INTENT: This is not a change order. This is a request to the Contractor for a detailed price breakdown of proposed changes in the work.

PROPOSED CHANGES:

Chlorine Dioxide Generator Panel Revisions

a) Delete the chlorine solution rotometer and chlorine dioxide generator individual by pass lines.

b) Install 2" PVC piping and valves to by pass both the chlorine solution rotometer and the chlorine dioxide generator combined as shown on Supplemental Drawing SM5 issued with this bulletin.

c) Provide and deliver to the Owner three (3) spool pieces to replace the chlorine solution rotometers. These spool pieces are to be installed in place of the rotometers while the rotometers are removed for maintenance.

REASON FOR CHANGE:

To decrease the back pressure at the chlorine injectors.
